

How can you make gorgeous crystals from salt?

Class 3 did!

We used 4 different salts in our science investigation to make our crystals which were; table salt, rock salt, sea salt and Epsom salt.

First we dissolved each salt in warm water to create a saturated solution. We then had to wait patiently until the water began to evaporate. Gradually we could see the crystals forming! We decided that the Epsom salts produced the prettiest crystals. While the table salt crystals were the biggest.
